PROFESSIONAL SUMMARY

Data Engineer with 5+ years of experience designing, building, and optimizing large-scale batch and streaming data pipelines in the telecommunications domain. Strong in SQL, Python, and PySpark with hands-on expertise in ETL/ELT development, cloud data warehousing (Snowflake), workflow orchestration (Apache Airflow), data transformation (dbt), and real-time streaming (Apache Kafka). Proven track record of processing 10M+ records daily, tuning queries for 40%+ performance gains, and delivering reliable, production-grade data solutions on AWS and Azure.

TECHNICAL SKILLS

Languages & Scripting	Python, SQL, PL/SQL, Java, Shell Scripting
Big Data & Processing	Apache Spark (PySpark), Apache Kafka, Hadoop, Hive
Warehousing & Modeling	Snowflake, Dimensional Modeling, Star/Snowflake Schema, SCD, Fact/Dimension Design
ETL/ELT & Orchestration	dbt, Apache Airflow, Snowpipe, COPY INTO, Streams & Tasks (CDC)
Cloud Platforms	AWS (S3, EC2, Lambda, RDS, Glue), Microsoft Azure (ADLS, Data Factory)
Databases	Oracle, PostgreSQL, MySQL, MongoDB, Redis
File Formats	Parquet, Avro, ORC, JSON, CSV
DevOps & Tools	Docker, Kubernetes, Jenkins, Git, GitLab, CI/CD, JIRA, Confluence
Practices	Data Modeling, Data Quality & Validation, Performance Tuning, Agile/Scrum

PROFESSIONAL EXPERIENCE

- Advanced Software Developer | Amdocs** Jun 2022 - Present
- **Selected and travelled onsite to Mexico (Apr - May 2026)** to spearhead data-pipeline development and an end-to-end data migration for **USCC (U.S. Cellular)** — owning source-to-target mapping and data validation while collaborating directly with client stakeholders to deliver a seamless, low-risk production cutover.
 - **Built and maintained batch and streaming ETL/ELT pipelines processing 10M+** telecom billing, ordering, and subscriber records daily using Python, PySpark, and SQL.
 - **Optimized complex Oracle and PostgreSQL queries and PL/SQL procedures, improving data processing performance by 40%** through partitioning, indexing, and query tuning.
 - **Developed real-time ingestion pipelines with Apache Kafka** for event-driven billing and subscriber modules (Change Offers, Promo Code Management, Move Subscriber).
 - **Modeled and loaded curated data into the cloud data warehouse** using star-schema dimensional modeling and SCD techniques for downstream analytics and reporting.
 - **Orchestrated and scheduled data workflows** with data-quality checks, idempotent reprocessing, and alerting to meet daily SLAs.
 - **Implemented CI/CD for data pipelines** using Jenkins, Docker, Kubernetes, and Git, reducing deployment time by 60%.
 - **Partnered with analysts and business teams** to translate requirements into scalable data models and pipelines in Agile sprints.

- **Developed ETL processes and data integration jobs** migrating legacy monolithic data stores into distributed, service-based data platforms.
- **Designed and optimized SQL queries and stored procedures** across MySQL and PostgreSQL, improving query performance by 45%.
- **Built data ingestion and transformation jobs** on AWS (EC2, S3) with Docker, automating workflows via Maven, Git, and Jenkins.
- **Ensured data quality and consistency** through automated validation and reconciliation checks across source and target systems.

PROJECTS

Telecom Billing & Usage Analytics Pipeline (End-to-End ELT)

PySpark • Snowflake • dbt • Apache Airflow • AWS S3 • Parquet

- Ingested raw billing and Call Detail Record (CDR) files from AWS S3, transformed them with PySpark, and loaded them into Snowflake using COPY INTO / Snowpipe.
- Built layered dbt models (staging to curated marts) with automated tests and SCD Type-2 dimensions; orchestrated daily runs and backfills with Airflow.
- Delivered star-schema marts powering BI dashboards, cutting report refresh time and enabling self-service revenue and usage analytics.

Real-Time CDR Streaming Pipeline

Apache Kafka • Python • Snowflake (Snowpipe, Streams, Tasks)

- Designed a streaming ingestion pipeline moving Call Detail Records through Kafka into Snowflake via Snowpipe for near-real-time availability.
- Used Streams and Tasks for change data capture (CDC) and incremental MERGE into curated tables, enabling minute-level analytics.

EDUCATION

Bachelor of Engineering in Computer Technology

KITS, Ramtek (Nagpur University) • CGPA: 7.02 / 10

2018

CERTIFICATIONS

Azure Data Fundamentals (DP-900)

Microsoft • 2021

Big Data 101

Cognitive Class • 2021

Azure Fundamentals (AZ-900)

Microsoft • 2021

Azure AI Fundamentals (AI-900)

Microsoft • 2021

IBM Certified Advocate - Cloud V1

IBM • 2021

SnowPro Core
